

# CONTENTS

|                  |   |           |
|------------------|---|-----------|
| <b>Chapter 1</b> | <b>Introduction</b>   | <b>1</b>  |
| <b>Chapter 2</b> | <b>Physical principle of the radiative transfer model</b>                           | <b>3</b>  |
| 2.1              | Theory of radiative transfer method   | 3         |
| 2.1.1            | <i>Basic radiative transfer equations for MC method</i>                             | 3         |
| 2.1.2            | <i>Basic algorithm for MC radiative transfer simulation</i>                         | 4         |
| 2.1.3            | <i>Example of a simple MC radiative transfer simulation</i>                         | 6         |
| 2.2              | Radiative properties in the atmosphere  | 9         |
| 2.2.1            | <i>Coordinate system and atmosphere-surface model</i>                               | 9         |
| 2.2.2            | <i>Gaseous absorption</i>   | 9         |
| 2.2.3            | <i>Rayleigh scattering</i>  | 10        |
| 2.2.4            | <i>Mie scattering: Aerosol and cloud particles</i>                                  | 13        |
| 2.2.5            | <i>Moment of particle size distribution and volume mixing ratio</i>                 | 15        |
| 2.2.6            | <i>Weighted average optical properties by particle size distribution</i>            | 16        |
| 2.2.7            | <i>Hygroscopic growth of aerosol</i>  | 18        |
| 2.3              | Radiative properties in plant canopies  | 21        |
| 2.3.1            | <i>Optical properties of a leaf</i>   | 21        |
| 2.3.2            | <i>Radiative transfer modeling of leaf canopy</i>                                   | 24        |
| 2.3.3            | <i>Canopy structure of forest and grassland</i>                                     | 26        |
| <b>Chapter 3</b> | <b>Basic algorithms</b>   | <b>28</b> |
| 3.1              | Generation of random numbers  | 28        |
| 3.1.1            | <i>Generation of uniform pseudorandom number</i>                                    | 28        |
| 3.1.2            | <i>Conversion method (inverse function method)</i>                                  | 29        |
| 3.1.3            | <i>LUT method</i>   | 31        |
| 3.1.4            | <i>Rejection method (selection-rejection method)</i>                                | 32        |
| 3.1.5            | <i>Weighting method</i>   | 33        |
| 3.1.6            | <i>Metropolis method</i>  | 34        |
| 3.1.7            | <i>Composite method</i>   | 34        |
| 3.1.8            | <i>Summary of random number generator</i>   | 35        |
| 3.2              | Emissions from radiation source   | 36        |
| 3.2.1            | <i>Emission energy and distribution of modeled photon</i>                           | 36        |
| 3.2.2            | <i>Solar radiation</i>  | 37        |
| 3.2.3            | <i>Point radiation source</i>   | 38        |
| 3.2.4            | <i>Thermal emission</i>   | 38        |
| 3.2.5            | <i>Modification of spatial distribution of radiation source based on importance</i> | 41        |
| 3.2.6            | <i>Radiation source of isotropic angular distribution</i>                           | 42        |
| 3.3              | Ray tracing   | 50        |
| 3.3.1            | <i>Intersection of modeled photon with geometric object</i>                         | 50        |
| 3.3.2            | <i>Relationship between modeled photon and geometric object in 3-D scene</i>        | 51        |
| 3.3.3            | <i>Relationship between modeled photon and surface with roughness</i>               | 56        |

|        |   |            |
|--------|---|------------|
| 3.3.4  | <i>Space subdivision method</i>   | 58         |
| 3.3.5  | <i>Boundary volume method</i>   | 58         |
| 3.4    | <b>Collision</b>  | 60         |
| 3.4.1  | <i>Collision probability and determination of collision point</i>                 | 60         |
| 3.4.2  | <i>Treatment of absorption</i>  | 62         |
| 3.4.3  | <i>Treatment of mixed media</i>   | 65         |
| 3.4.4  | <i>Russian roulette method and photon-splitting method</i>                        | 67         |
| 3.5    | <b>Scattering</b>   | 69         |
| 3.5.1  | <i>Scattering process</i>   | 69         |
| 3.5.2  | <i>Modeling of scattering by MC method</i>  | 73         |
| 3.6    | <b>Reflection</b>   | 78         |
| 3.6.1  | <i>Definitions</i>  | 78         |
| 3.6.2  | <i>Reflection from surface with arbitrary BRDF</i>                                | 80         |
| 3.6.3  | <i>Isotropic reflection: Lambertian reflection</i>                                | 82         |
| 3.6.4  | <i>Diffuse-specular mixture model: DSM model</i>                                  | 84         |
| 3.6.5  | <i>Rahman-Pinty-Verstraete (RPV) BRDF model</i>                                   | 90         |
| 3.6.6  | <i>Li-Sparse-Ross-Thick (LSRT) BRDF model</i>                                     | 98         |
| 3.7    | <b>Refraction</b>   | 108        |
| 3.7.1  | <i>Snell's law and Fresnel equations</i>  | 108        |
| 3.7.2  | <i>Treatment of refraction in atmosphere</i>                                      | 109        |
| 3.7.3  | <i>Refractive index in earth's atmosphere</i>                                     | 111        |
| 3.8    | <b>Calculation of irradiance and heating rate</b>                                 | 113        |
| 3.8.1  | <i>Definition of radiative quantities and sampling of quantities by MC method</i> | 113        |
| 3.8.2  | <i>Method I: Random sampling of transmittance</i>                                 | 114        |
| 3.8.3  | <i>Method II: Analytical sampling of transmittance</i>                            | 115        |
| 3.8.4  | <i>Method III: Hybrid method</i>  | 117        |
| 3.8.5  | <i>Method IV: Use of equivalence theorem for absorption</i>                       | 118        |
| 3.9    | <b>LEM</b>  | 120        |
| 3.9.1  | <i>Formulas for local estimate</i>  | 120        |
| 3.9.2  | <i>Definition of PDF for angular distribution</i>                                 | 123        |
| 3.10   | <b>Treatment of atmospheric sphericity</b>  | 126        |
| 3.10.1 | <i>Characteristics of sphericity effect</i>                                       | 126        |
| 3.10.2 | <i>Correction of sphericity effect for line of sight</i>                          | 127        |
| 3.11   | <b>Spectral integration</b>   | 133        |
| 3.11.1 | <i>Extraterrestrial solar irradiance and photon flux density</i>                  | 133        |
| 3.11.2 | <i>Calculation of spectral integration</i>  | 134        |
| 3.12   | <b>Canopy photosynthesis</b>  | 137        |
| 3.12.1 | <i>Single leaf photosynthesis rate</i>  | 137        |
| 3.12.2 | <i>APAR calculation</i>   | 138        |
|        | <b>Chapter 4 Improvement of numerical efficiency</b>                              | <b>140</b> |
| 4.1    | <b>MCS method</b>   | 140        |

|  |  |            |
|--|--|------------|
| 4.1.1  | <i>Base of MCS method</i>  | 140        |
| 4.1.2  | <i>Discussion on efficiency of MCS method</i>                                      | 141        |
| 4.2  | Variance reduction methods   | 143        |
| 4.2.1  | <i>Exponential transformation method</i>   | 143        |
| 4.2.2  | <i>Modification of contribution function</i>                                       | 144        |
| 4.2.3  | <i>Truncation approximations for anisotropic scattering</i>                        | 147        |
| 4.2.4  | <i>Collision-forcing method</i>  | 153        |
| 4.2.5  | <i>Numerical diffusion</i>   | 155        |
| 4.2.6  | <i>Semi-analytical calculation of direct-beam and single-scattering components</i> | 155        |
| 4.3  | Parallelization  | 157        |
| 4.3.1  | <i>Parallel programming</i>  | 157        |
| 4.3.2  | <i>Parallel computing by MC method I: Photon split method</i>                      | 157        |
| 4.3.3  | <i>Parallel computing by MC method II: Space split method</i>                      | 158        |
| <b>Chapter 5 Introduction of radiative transfer models and examples of applications...</b> |  | <b>160</b> |
| 5.1  | Simple code for MC radiation   | 160        |
| 5.2  | Introduction of atmospheric radiative transfer model                               | 163        |
| 5.2.1  | <i>Radiative transfer model MCARaTS</i>  | 163        |
| 5.2.2  | <i>Calculation examples using MCARaTS</i>  | 166        |
| 5.3  | Introduction of plant canopy radiative transfer model                              | 170        |
| 5.3.1  | <i>Plant canopy radiative transfer model</i>                                       | 170        |
| 5.3.2  | <i>Simulated results</i>   | 173        |
| <b>Chapter 6 Conclusion</b>  |  | <b>176</b> |
| <b>Acknowledgements</b>  |  | <b>177</b> |
| <b>Appendix</b>  |  | <b>178</b> |
| A1   | Analytical functions for size distribution   | 178        |
| A1.1   | <i>Power-law distribution</i>  | 178        |
| A1.2   | <i>Gamma distribution</i>  | 178        |
| A1.3   | <i>Modified/generalized gamma distribution</i>                                     | 180        |
| A1.4   | <i>Lognormal distribution (number density)</i>                                     | 181        |
| A1.5   | <i>Lognormal distribution (volume density)</i>                                     | 182        |
| A2   | Optical properties of mixed media  | 183        |
| A3   | Spectrally averaged optical properties   | 185        |
| A4   | Vertical profile of aerosols   | 186        |
| A5   | Representation of photon transport by direction vector                             | 188        |
| A5.1   | <i>Movement of photon</i>  | 188        |
| A5.2   | <i>Rotation of direction due to scattering</i>                                     | 188        |
| A5.3   | <i>Angle between two vectors</i>   | 189        |
| A6   | Determination of random point in a circle: Polar coordinate method                 | 190        |
| A7   | Mathematical functions   | 191        |
| A7.1   | $\cos^{-1}x$   | 191        |
| A7.2   | $\exp(-x)$   | 192        |

|            |                               |     |
